

You reached the end of this learning module. You are now able to:

- Describe and use NodeRED and some of its features that supports Rapid application development
- Deploy NodeRED on Bluemix from a boilerplate
- Create a NodeRED flow and learn about inject, debug nodes and subflows
- Deploy a NodeRED application on Bluemix.
- Import and export NodeRED flows
- Access the application's code, modify it by adding more nodes available, and redeploy it (DevOps and delivery pipeline)
