

You reached the end of this learning module. You are now able to:

- Add a service (i.e. Internet of Things Platform) to your application running on IBM Bluemix
- Describe the value of the Internet of Things Platform service (including secure connectivity)
- Configure the Internet of Things Platform service
- Describe the security and connectivity value of the organization
- Describe how device types, application types, gateway devices can communicate with the platform and each other
- Create a device type, register devices, classify devices
- Authenticate an application to the platform
- Securely connect a device to an organization as a registered device type, and publish data to the organization.
- Bind a cloud application that is running on Bluemix, to a service where devices are registered
- Securely connect a gateway to an organization as a registered device type, and publish data from sensors to the organization.
